Your Compliance Score: 8.1

[Cyber Security Report](#)

DEFCON™ Cybersecurity Risk Management was designed and developed with a focus on the cybersecurity challenges facing small businesses. Those challenges include: how to operate to industry best practices for managing cyber risk, being aware of vulnerabilities in your business operations, and identifying the right priorities to address critical events, given constrained time and resources.

DEFCON™ Cybersecurity Risk Management is a cloud-based solution that helps to reduce this high level of risk through continuous monitoring of your devices (PCs, servers, notebooks, laptops) and leveraging widely adopted best practices to compute a cyber score. This score and related vulnerability alerts keep you aware of the level of cyber risk in your business and recommended remediation to protect what is most important to you.

The National Institutes of Standards and Technology (NIST) Cybersecurity Framework (CSF) is a widely adopted approach to managing cyber risk by providing a guide to all businesses on how to implement industry best practices to better protect a business against the growing cyber threat. The NIST guide offers best practices across the five areas of cybersecurity impacting a business.

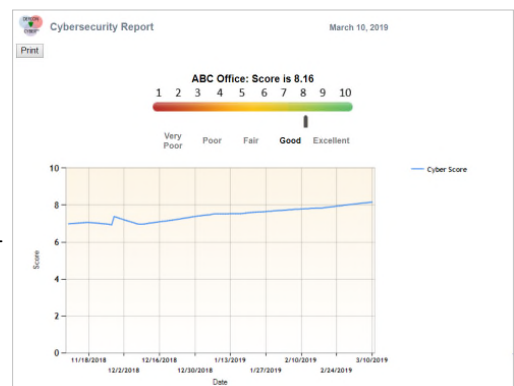

DEFCON™ utilizes 12 of the NIST CSF best practices for small businesses, allowing comprehensive protection with a focus on inventory tracking, vulnerability scanning with recommended remediation actions, and antivirus/malware virus definitions update monitoring.

DEFCON™ Cybersecurity Risk Management was designed for easy implementation and delivery of risk status at-a-glance, in the form of a weekly report displaying your cybersecurity score and risk level (red, yellow, green), along with your scoring trend and what is influencing your score.

This report enables you to see risk status at any time .

Implementation takes just a few minutes with the installation of DEFCON™ and integrated security agents that activate automatically upon installation.

Experience how DEFCON™ Cybersecurity Risk Management can make you more aware of the cyber risk in your business operations and recommended remediation to reduce your cyber risk exposure!
