

DEFCON™ Data Privacy Risk Management

Rofori Corporation understands the complexities of complying with the new comprehensive consumer protection privacy laws regarding data privacy, global and within the U.S.

Europe is now covered by the world's strongest data privacy protection rules. GDPR alters how businesses and public sector organizations can handle the information of their customers. It also boosts the rights of individuals and gives them more control over their personally identifiable information (PII).

Vendor Quadrant

Vendor management has become significantly more important in data protection and privacy programs. Without the proper tools, vendor management can quickly become tracking chaos, due to the sheer volume of PII being shared/held across hundreds or thousands of vendors and related third parties.

For enterprises needing to validate cybersecurity and data privacy risk compliance within their supply chains and vendor networks, Rofori offers the cloud-based solution, DEFCON™ Data Privacy Risk Management, that aligns to the requirements of the GDPR, CCPA , and Privacy Shield.
