

Cybersecurity Risk Assessment—NIST CSF

The National Institutes of Standards and Technology (NIST) Cybersecurity Framework (CSF) is a widely adopted approach to managing cyber risk by providing a guide to all businesses on how to implement industry best practices to better protect a business against the growing cyber threat. The NIST CSF offers best practices across the five functions of cybersecurity impacting a business.

The Rofori Cybersecurity Risk Assessment—Cybersecurity Framework (CSF) is a cloud-based solution that helps to reduce risk through assessment and scoring, based on your alignment to the NIST CSF. The NIST CSF is a fundamental component of an organizational risk management process. Risk assessments are used to identify, estimate, and prioritize risk to organizational operations, organizational assets, individuals, other organizations, and the country, resulting from the operation and use of information systems. In accordance with the NIST Cybersecurity Framework, the Rofori Cybersecurity Risk Assessment—Cybersecurity Framework (CSF) lays out the entire framework in an easy-to-use environment that a user can manage an organization's security program. The Risk Assessment enables users to maintain and update the security posture over the course of time in a collaborative environment. Multiple individuals can access this system to continuously update their respective

function in an organization and all can quickly see where the organization's vulnerabilities are at any moment in time.

The Rofori Cybersecurity Risk Assessment's inherent and residual risk feature, nested with NIST SP 800-30, enables an organization to assess risk prior to and after mitigation measures are implemented. This feature serves as a core capability that enables an organization's ability to manage risk priorities and risk tolerance. The dashboard enables individuals at all levels of the organization to quickly see the organizational risk in accordance with their preferred cybersecurity standard. The current inherent and residual risk calculation is promptly displayed helping you understand your most critical risks within your organization and serves as a means to focus on implementing proper remediation to protect what is most important.

The Rofori Cybersecurity Risk Assessment was designed for easy implementation and delivery of risk status at-a-glance, in the form of a drill-down dashboard status display providing detailed visibility to your cybersecurity assessment status, as determined by your implementation response. Experience how the Rofori Cybersecurity Risk Assessment can make you more aware of the cyber risk in your business operations and help prioritize remediations to reduce your cyber risk exposure!
